Claims 1-6, 8-10, 13-22, 24-38 and 40-46 remain pending for examination.

The Terminal Disclaimer filed 08/18/2008 is acknowledged.

Response to Arguments

Applicant's arguments, filed 08/18/2008, with respect to the rejections of claims have been fully considered and are persuasive. The rejections of the last Office action have been withdrawn.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Mark M. Friedman (Reg. No. 33,883) on October 22, 2008.

The application has been amended as follows:

In the claims,

Claim 45

Line 22, change "which said respective coded entry was transformed." to - - which said respective coded entry was transformed, - -.

REASONS FOR ALLOWANCE

With respect to claims 1-6, 8-10, 13-22, 24-38 and 40-46 are allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance:

With respect to the independent claims 1 and 21, the claimed features "a computer-implemented method of searching an ordered database using transformed key entries, wherein a length, expressed as a number of bits, of said respective coded entry is reduced with respect to a length, expressed as a number of bits, of said key entry from which said respective coded entry was transformed, and wherein a function operative to perform said pre-determined transformation is substantially independent of specific content of each said key entry of said key entries" in conjunction with other elements of the independent claims are not suggested, anticipated or found to be obvious over the prior art made of record. With respect to the independent claim 42, the claimed features "a computer-implemented method of searching an ordered database using transformed key entries, wherein a function operative to perform said pre-determined transformation said substantially independent of specific content of each said key entry of said key entries, and wherein said information includes information resulting from at least one varying bit, said at least one varying bit including a most significant bit" in conjunction with other elements of the independent claims are not suggested, anticipated or found to be obvious over the prior art made of record. With respect to the independent claim 45, the claimed features "a computer-implemented method of searching an ordered database using transformed key entries, wherein a length, expressed as a number of bits, of said respective coded entry is reduced with respect to a length, expressed as a number of bits, of said key entry from which said respective coded entry was transformed, wherein a first coded entry of said coded entries includes positional information relating to a first key entry, and wherein a second coded entry of said coded entries includes positional information relating to a second key entry, said second key entry being different from said first key entry" in conjunction with other elements of the independent claims are not suggested, anticipated or found to be obvious over the prior art made of record. With respect to the independent claim 46, the claimed features "a computer-implemented method of searching an ordered database using transformed key entries, wherein a function operative to perform said pre-determined transformation is substantially independent of specific content of each said key entry

Art Unit: 2162

of said key entries, wherein performing said deterministic search in said at least one data structure includes searching said coded entries to identify a potential match between said input key and said key entry of said key entries, and searching said key entries to determine whether said potential match is said particular match" in conjunction with other elements of the independent claims are not suggested, anticipated or found to be obvious over the prior art made of record.

The dependent claims, being definite, further limiting, and fully enabled by the specification are also allowed.

The closest prior art, Stark, U.S. Pub. Number 2002/00007446 relates to a method and apparatus for storing associative ranges containing keys and data associated with said ranges.

Fuh et al., U.S. Patent Number 6,219,662 relates to support database indexes based on a generalized B-tree index.

Kimura, U.S. Patent Number 5,933,104 relates to variable-sized length and offset fields in copy tokens but fail to teach the above limitations

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
